Explanation of all web application pages

Link web app: <https://people-joy-nexus.lovable.app>

Page 1 – Dashboard

The dashboard serves as a home page to give a preview into the Human Resource Management System. It provides action button shortcuts to each main HR function, and quick insights into HR statistics about total employees, departments, job positions, training programs, active assignments, and performance cycles.

Page 2 - Employees

The employee's page is to view, add, search, and manage employee records. There is a button at the top to add a new employee, which when clicked opens a page to add a new employee by adding their personal information and contact information.

Users of the web app are able to search for an employee by their name using the search bar.

The employee tab displays detailed information for each employee including: ID, name, email, nationality, phone, employment status (active/probation). Actions that can be done like viewing employee, editing, and deleting an employee record are part of the employee page.

Page 3 – Departments

The departments page is used to view, search, add, and manage departments on the HR Management System. It contains a button to add a department that opens a form to fill information about the new department to be added.

It includes a search bar that allows to search for departments using their name. The departments table includes a listing of all departments and their details. The columns in it are ID, Department Name, location, email, type (academic/administrative), and actions like edit to modify department details or delete to remove a department.

Page 4 – Jobs

The jobs page allows for defining, viewing, managing job positions and their details. The header contains a button to add a new job. There is a search bar to allow for searching for a job using job title or code. The columns in the jobs table includes job code which is the primary key, job title, category (if the job is academic or administrative), seniority level (whether the job is executive/senior/mid/junior). There's also the department column that indicates the department the job belongs to, salary range including minimum and maximum salary, and job status (active/inactive).

Each record in the job table can be viewed, edited, or deleted.

Page 5 – Job Assignments

The job assignments page is to manage and assign jobs to employees and manage their contracts, dates, and salaries.

The header contains a button to add a new job assignment, assigned to an employee. A search bar can be used to search for a job assignment by employee name or job title.

The job assignments table shows which employee holds which job, and under what conditions. The columns are employee containing the name of the employee, job column containing job title and job code. The contract column includes the type of employment contract: full-time permanent, part-time teaching, or probationary contract.

There are also columns for the start date of when the employee started this job and end date in case of knowing when the job ends, or (–) if the job is still ongoing. The salary column includes the actual salary, not a salary range like in the jobs table. The status column includes the current column status (active/ended/inactive). Each job assignment record can be edited or deleted.

Page 6 – Training Programs

The page header includes the title “Training Programs” and an add program button to create a new training program. The rest of the page includes a search bar used to find quickly a training program by title or code.

The training programs table includes code column that contains a unique code for each training program. There's a title column including training program title. The type column includes what category each program is in: professional, technical, academic, compliance, soft skills. The subtype column specifies what focus area the training program is in (management, IT skills, etc.)

The delivery method column describes how the training is taken: in-person, online, or hybrid (mix of in-person and online). The status column includes the current state of the program, whether “approved” and ready for enrollment or “pending” and waiting for approval. Each training program record can be viewed, edited, or deleted.

Page 7 - Performance Cycles

- List page showing all cycles with name, type (Annual/Quarterly/Mid-Year), date range, and submission deadline
- Detail page displays cycle info and lists all appraisals submitted for that cycle

- Form allows creating/editing cycles with name, type, start/end dates, and submission deadline

Page 8 - Appraisals

- List page shows appraisals with employee name, job title, performance cycle, reviewer, date, and overall score
- Detail page displays full appraisal info including employee comments, manager comments, and HR comments
- Form lets you create/edit appraisals by selecting an assignment (employee+job), performance cycle, reviewer, date, score (1-5), and all three comment fields

Page 9 - Appeals

- List page shows appeal with employee name, original score, appeal outcome score, submission date, and approval status (Pending/Approved/Rejected)
- Form allows creating/editing appeals linked to an appraisal, with original score, reason for appeal, outcome score, submission date, and approval status

All pages follow consistent patterns with search/filter, view/edit/delete actions, and confirmation dialogs for deletions.

Dashboard 2

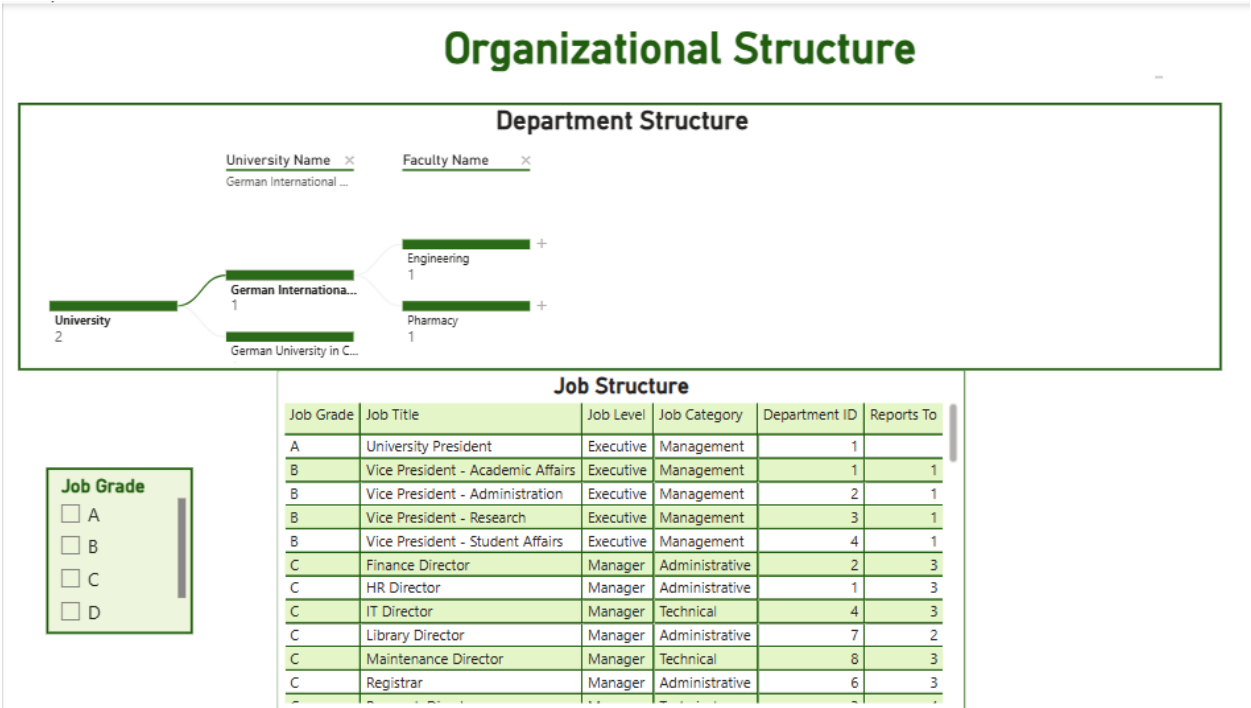

Dashboard 3

Dashboard 4

Dashboard 5

Explanation of how each dashboard page uses your database views

Dashboard 1

KPI Card Total Employee

The KPI Card uses the view `vw_employee_count_by_department` to get the employee count per department.

It then adds up `Employee_Count` to display one total number of employees in the KPI Card.

KPI Card Active Employee

The KPI Card uses the view `vw_employment_status_distribution` and filters `Employment_Status = 'Active'`.

It then displays the Total value as the number of active employees.

KPI Card Average Age

The KPI Card uses the view `avg_age_view` and displays the `average_age` value as the average employee age.

KPI Card Average Service Year

The KPI Card uses the view `vw_service_years` and displays the `Average_Service_Years` value as the average employee service years.

Employees by Department (Bar Chart)

The Bar Chart uses the view `vw_employee_count_by_department` as its data source.

Department name (`DEP_NAME`) is used on the axis, and `Employee_Count` is used as the value to show the number of employees in each department. The employee count is calculated by counting distinct `EMPLOYEE_IDs` in the `JOB_ASSIGNMENT` table for each department.

Employment Status Distribution (Pie/Donut Chart)

The chart uses the view `vw_employment_status_distribution`, where employees are grouped by `Employment_Status` and counted using `COUNT(*)`.

Each slice represents the total number of employees in each employment status (e.g., Active, Inactive).

Gender Breakdown (Pie/Donut)

The chart uses the view `vw_gender_distribution`, where employees are grouped by Gender and counted using `COUNT(*)`.

Each slice shows the total number of employees of each gender.

Dashboard 2

KPI Card Active Jobs

The KPI Card uses the view `vw_ActiveJobCount`, which counts all jobs with status = 'Active'. The card simply displays the `total_active_jobs` value as the number of active jobs.

KPI Card Total Jobs

The KPI Card uses the view `vw_jobs_by_level`, which counts all jobs grouped by `Job_Level`. The card sums the `Total_Jobs` across all levels to display the total number of jobs.

Jobs by Level (Column Chart)

The Column Chart uses the view `vw_jobs_by_level`.

`Job_Level` is placed on the axis, and `Total_Jobs` is used as the column height, showing the number of jobs at each job level.

Job Level Slicer

The Job Level slicer uses the view `vw_jobs_by_level` as its source.

It lists all `Job_Level` values from the view, allowing users to filter visuals (like total jobs or salary charts) by selected job levels.

Salary Statistics by Job Category (Multi-bar Chart)

The Multi-bar Chart uses the view `vw_salary_stats_by_category`.

For each `Job_Category`, it shows three values: minimum salary (`Min_Salary`), maximum salary (`Max_Salary`), and average salary (`Avg_Salary`), allowing comparison of salary ranges across categories.

Active Job Assignments (Table)

The `vw_active_job_assignments` view provides a table of current active job assignments. It selects only assignments with `STATUS = 'Active'`. For employees with multiple active assignments, it uses `ROW_NUMBER()` to keep only the most recent assignment based on `START_DATE`.

The resulting table includes key details like `ASSIGNMENT_ID`, `EMPLOYEE_ID`, `JOB_ID`, `CONTRACT_ID`, `START_DATE`, and `END_DATE`, which can be used in dashboards or reports to track active roles per employee.

Dashboard 3

Average Appraisal Score by Cycle (Column Chart)

This visual uses vw_appraisal_scores_per_cycle to group employee appraisal overall scores by performance cycle, then calculates the average appraisal score for each cycle, allowing comparison of performance across appraisal cycles.

Appraisal Summary (Table)

This table uses vw_full_appraisal_summary to display a detailed, employee-level appraisal overview, combining employee, job, performance cycle, appraisal score, and all appraisal comments in one consolidated view for review and analysis.

Average Appraisal Score (Card)

This card uses vw_appraisal_scores_per_cycle to calculate the overall average of all appraisal scores, providing a single KPI that summarizes employee performance across all appraisal cycles.

Percentage of Submitted KPI Scores (Card)

This visual uses vw_kpi_completed to calculate the percentage of KPI scores that have been submitted, by comparing KPIs with actual values against the total number of KPIs, showing overall KPI completion progress.

Active Cycles (Card)

This card uses vw_active_performance_cycles to count the performance cycles that are currently active, based on today's date falling between the cycle start and end dates, giving a real-time view of ongoing appraisal cycles.

KPI Summary (Heat Map)

This heat map uses vw_kpi_scores_summary to visualize employee KPI performance by cycle, where color intensity represents total weighted KPI scores or average scores, enabling quick identification of high and low performers across performance cycles.

Dashboard 4

Training Completion Rate (Card)

This card uses `vw_overall_completeness_rate` to calculate the percentage of completed trainings out of all assigned trainings, providing a clear KPI that reflects overall employee training completion progress.

Certificates Issued (Card)

This card uses `vw_pro_certificate` to calculate the total number of training certificates issued, by counting certificates generated from completed employee trainings, summarizing certification achievements across employees.

Training Programs (Card)

This card uses `vw_training_participation` to show the number of active training programs, derived from distinct training programs while also supporting participant analysis through aggregated employee participation data.

Training Completed (Bar Chart)

This bar chart uses `vw_training_completion_stats` to display training completion status by program, showing counts of completed, in-progress, not started, and dropped trainings for each program, allowing a visual comparison of training progress across programs.

Certificates Issued (Column Chart)

This column chart uses `vw_certificate_count` to show the number of professional certificates earned by each employee, with columns representing employees and their certificate counts for easy comparison of certification achievements.

Training Participation (Bar Chart)

This bar chart uses `vw_training_participation` to display the number of employees participating in each training program, with bars representing programs and their total participants, enabling comparison of program engagement levels.

Dashboard 5

Department Structure (Tree)

The Department Structure Tree uses the view `vw_department_structure_tree` as its source.

It provides a hierarchical structure from university → Faculty → Department.

Each node includes IDs and names, allowing the tree visual to show the organization's academic departments in a nested format.

Job Structure Overview (Table)

The Job Structure Overview Table uses the view `vw_job_key_info_distinct` as its source.

It provides a distinct list of jobs with key details: `Job_Title`, `Job_ID`, `Job_Code`, `Job_Level`, `Job_Category`, `Job_Grade`, `Department_ID`, and `Reports_To`.
